

Strategy details

Inception	1 October 2020
Min. initial investment (direct)	£20,000
Min. initial investment (platform)	£1,000
Rebalancing strategy (min.)	Quarterly
Currency	£ GBP

Charges

Annual management charge (direct)	0.75%
Annual management charge (platform)*	0.30%
Ongoing charges figure	0.41%

*Not including platform fees.

Investment objective

To assist investors in drawdown, looking to preserve their capital in real (inflation-adjusted) terms over the medium to longer term but who feel comfortable with some moderate fluctuation in values.

Risk profile

The strategy is managed in accordance with Dynamic Planner risk profile 5 and is part of their RMD offering. The strategy's expected annual VaR is targeted to stay within the assigned Dynamic Planner risk profile's boundaries. The strategy is categorised as a Bordier Decumulation Risk Profile 2.

About the RTD Service

The service consists of three actively managed investment strategies that are designed for investors in drawdown. The service puts capital preservation first and seeks to minimise the risk of eroding capital in falling markets whilst a fixed regular income is being taken.

Each investment strategy has a different level of risk and expected return, with each targeted to a particular Dynamic Planner Risk Managed Decumulation ('RMD') risk profile (4-6). Each investment strategy is checked by Dynamic Planner on a monthly basis to ensure that it stays within the expected annual Value at Risk ('VaR') boundaries assigned to the corresponding Dynamic Planner risk profile.

Investment update

Asset returns were strong over May with both developed market equities and global bonds rising. After a weak April, the US equity market rebounded strongly as rate expectations fell. Uncertainty over the interest rate outlook continues to bring some volatility however market momentum remains positive. European markets also performed well and the European Central Bank continues to signal a potential interest rate cut in June. The UK market rose 2.5%, lagging the US and eurozone largely due to its 'value' bias and high exposure to energy stocks. UK inflation fell and is expected to fall further still in the short term. We continue to see tailwinds, which should be supportive for financial markets in the coming months. No changes were made over the month as the strategy remains at the upper end of its corresponding Dynamic Planner risk profile. We expect further reductions in inflation towards central bank targets and a consequent easing of financial conditions as tight monetary policy is unwound. We are having to tolerate unusually high levels of volatility in sovereign bond markets but expect our exposure to be rewarded over the course of the next 12 months. The yields available in investment grade credit remain compelling in our view and spreads are proving resilient. Our core alternatives funds continue to perform well, providing clear diversification benefits in times of market weakness.

Why decumulation?

Investors drawing on their portfolio for a regular monthly income are in danger of negatively impacting the total return available to them based on the timing of their withdrawals. Known as sequencing risk, this can have a significant impact on an investor who depends on the income and is no longer contributing new capital that could offset losses.

Within a dedicated decumulation strategy, volatility is micro-managed to smooth out monthly performance and mitigate risk. By doing so, investors will experience less frequent volatility spikes, decreasing the speed at which the value of their portfolio shrinks.

Performance

Inception performance

Annualised performance

	1yr	3yr*	5yr*	10yr*
RTD 5	8.1%	2.2%	-	-

Annualised expected loss (Value at Risk)

Value at Risk ('VaR') measures the expected maximum loss of a strategy, given usual market conditions, over a specific time period and at a particular confidence level.

Annualised expected VaR (rounded to 1 d.p.) based on latest Dynamic Planner assumptions. Bordier UK asset allocation as at 31.05.24. Dynamic Planner calculates the strategy's VaR monthly using a 95% confidence level.

Cumulative performance

	1yr	3yr*	5yr*	10yr*
RTD 5	8.1%	6.9%	-	-

Discrete performance

	YTD	2023	2022*	2021*	2020*	2019*
RTD 5	2.1%	7.0%	-5.2%	5.1%	4.4%	-

*Performance from inception (01.10.20) to 31.01.22 is simulated past performance based on back-tested data (represented by the orange dashed line).
