### Investment objective

To build capital in real (inflation-adjusted) terms over the medium to longer term. Investors should expect a high correlation to stock market behaviour and rewards, and be entirely comfortable with substantial volatility and very limited protection in times of market weakness.

### Risk profile

The strategy is managed with a maximum target of 100% equity market exposure and is categorised as a Bordier Risk Profile 5.

### About the Managed Portfolio Service

Our Managed Portfolio Service ('MPS') has been awarded the maximum Defaqto 5 stars as a solution for advisers to manage client assets directly with Bordier UK. The service offers five actively managed investment strategies ranging from Defensive to Adventurous. Each strategy has a different level of risk and potential return, with risk categorised by equity market exposure that increases in increments of 20% for each strategy, and the ability to select an income option to benefit from regular income from the strategy as well as potential long-term capital growth.

### Investment update

August was a volatile month for markets. Equity markets initially sold off aggressively on the back of weak manufacturing and jobs data from the US, stoking fears of a looming recession. Sentiment then shifted and markets staged a strong recovery as the weaker economic data increased expectations of imminent rate cuts in the US. Most markets ended the month in positive territory. Interest rate sensitive sectors performed particularly well and it is encouraging to see some broadening in market leadership and strength in value sectors that have been somewhat recently overlooked. The more dovish backdrop provided a strong environment for fixed income markets and sent the Barclays Global Aggregate Index up over 2% in local currency terms as yields fell. Expectations are now for 25 basis point cuts at each of the US Federal Reserve's next three monthly meetings. Investment grade credit also performed well as positive news flow suggests that the corporate sector is in good health and balance sheets are relatively strong. After an extraordinary period of rate hikes, it is encouraging to see a more 'normal' market environment developing in which a period of weakness for equity markets saw a strong period from fixed income assets. We remain comfortable at the top end of the strategy's allowable equity range, as such no asset allocation changes were made over the month. Inflationary pressures have substantially subsided, which should support further easing in monetary policy across the developed world, with the now expected first rate cut in the US likely to be a key milestone. Expectations regarding the strength of the global economy have incrementally improved and growth of 3% per annum over the next three years is expected – an acceptable level that should be supportive for risk assets. Within fixed income, exposure remains to both longer-dated fixed income assets and to investment grade credit where yields still offer some relative value and default rates look set to stay low. Our core alternatives funds continue to perform very well and high stock dispersion provides a good environment for skilled stockpickers (especially long/short market neutral strategies). We have reduced our exposure more recently however as the opportunity set within conventional fixed income markets has improved.
