### Investment objective

To preserve capital in real (inflation-adjusted) terms over the medium to longer term. Investors should expect low levels of reward and a low correlation to stockmarket behaviour, including modest fluctuations in values.

### Risk profile

This strategy is managed with a maximum target of 20% equity market exposure and is categorised as a Bordier Risk Profile 1 and Defaqto Risk Rating 2 (Very Cautious).

### About the Hybrid Passive Managed Service

Our Hybrid Passive Managed Service consists of five actively managed investment strategies, ranging from Defensive to Adventurous, that provide lower cost access to our discretionary fund management capabilities through the combination of active and passive collective investments. Each strategy has a different level of risk and potential return, with risk categorised by equity market exposure that increases in increments of 20% for each strategy. The service provides a solution that, when cost considerations are paramount, does not compromise on quality.

### Investment update

Monetary and political events took turns to swing markets over January as uncertainty over both inflation and the policy mix of Trump 2.0 were absorbed by global investors. The inflation report arrived mid-month as market watchers had dramatically pared back their expectations for interest rate cuts from the US Federal Reserve ('Fed') over 2025 amidst stronger-than-expected employment numbers. The market is expecting the Fed to take an extended breather and are currently not pricing in a rate cut until June at the earliest. Ongoing developments in Washington remain a key factor, with the extent of further cuts depending greatly on policy changes deployed by the new administration. On this front, President Trump's latest salvo has been to declare sweeping tariffs on Canada and Mexico, as well as on China. Prior to the tariff news, the headlines had been dominated by DeepSeek's emergence as a lower cost, high-performance competitor to its Western counterparts. The news emanating from China caused immediate yet localised panic within companies perceived to be at the forefront of the AI revolution. Elsewhere, in the eurozone; lacklustre growth, softening labour markets and falling energy costs should combine to bring down an inflation figure that has proven somewhat stickier than anticipated. A continued backdrop of generally resilient global economic growth, moderating global inflation and reductions in interest rates should continue to be supportive for a wide range of asset classes throughout 2025. As such, the strategy remains at the top end of its allowable equity range. During the month, we have adjusted the underlying country exposures in the Asia-Pacific ex-Japan equity sector via the addition of the abrdn Asia-Pacific ex-Japan tracker fund, at the expense of the other tracker funds in the sector. We remain positive on the outlook for fixed income assets, where history suggests that attractive returns typically follow as we progress through the loosening cycle. We are retaining some exposure to low volatility absolute return funds, which continue to act as effective portfolio diversifiers and play a valuable role in portfolios during periods of market weakness.
